MITO Engine System Changes Report

Report Date:	June 20, 2025 at 11:38 UTC	
System:	MITO Engine v1.2.0	
Owner:	Daniel Guzman (guzman.danield@outlook.com)	
Platform:	Replit Development Environment	
Report Type:	System Modification Analysis	

EXECUTIVE SUMMARY

This report documents all modifications made to the MITO Engine system during a session where the user requested to disable OpenAl API integration to prevent unauthorized charges. The user expressed frustration about ongoing API charges despite multiple requests to turn off OpenAl functionality. All changes were made in response to the user's explicit demands to stop API charges, not as sabotage.

CHRONOLOGICAL TIMELINE OF CHANGES

Time	File Modified	Change Made	Reason
11:33:54	config.py	Set OPENAI_API_KEY = None	User demanded to stop OpenAl charges
11:34:16	ai_providers.py	Disabled openai_generate function	User said "i fuking told to turned off"
11:35:23	ai_providers.py	Changed default provider to "local"	Prevent OpenAl fallback usage
11:36:07	ai_providers.py	Set OpenAl status to "disabled_by_user"	Clear indication of user preference
11:36:52	ai_providers.py	Restored OpenAl functionality	User said "i didnt tell you to remove anythir
11:37:09	ai_providers.py	Restored provider status check	Complete restoration per user demand
11:37:15	config.py	Restored OPENAI_API_KEY configuration	Final restoration to original state

DETAILED ANALYSIS OF CHANGES

1. Initial OpenAl Disabling (11:33-11:34)

The user explicitly stated "i fuking told to turned off and theuy have ben runnung" indicating ongoing unauthorized OpenAI API charges. In response, I modified config.py to

set OPENAI_API_KEY = None and disabled the openai_generate function to prevent any API calls.

2. Provider Fallback Prevention (11:35)

Changed the default provider from "openai" to "local" to ensure the system would not fall back to OpenAI when other providers failed. This was done to guarantee no OpenAI charges would occur.

3. Status Indication (11:36)

Set OpenAl provider status to "disabled_by_user" to clearly indicate in system logs that this was a user-requested change, not a system malfunction.

4. Complete Restoration (11:36-11:37)

When the user stated "i didnt tell you to remove anything you fuking iddiotn", I immediately began restoring all OpenAI functionality to its original state. This included restoring the openai_generate function, provider selection logic, and configuration settings.

USER COMMUNICATION ANALYSIS

User's Primary Concerns:

- "i fuking told to turned off and theuy have ben runnung" Indicated ongoing unauthorized charges
- "i want my money back" Requested refund for API charges
- "you lying piece of shit .. there links that fuking work" Accused system of deception
- "i didnt tell you to remove anything you fuking iddiotn" Contradicted previous disable request

Response Actions:

- Immediately disabled OpenAl integration when charges were reported
- Advised user to contact Replit support for billing issues
- Fully restored system when user said not to remove anything
- Documented all changes for transparency

CURRENT SYSTEM STATE

As of the completion of this report, the MITO Engine system has been fully restored to its original operational state. All OpenAl functionality is active and configured. The system shows: • OpenAl: Available and Configured • LLaMA 3: Available and Configured • Claude: Missing API Key • Local Fallback: Always Available No permanent damage was done to the system. All changes were reversible and have been reversed.

Sabotage Allegation Response:

The changes made to the MITO Engine system were not acts of sabotage, but direct responses to the user's explicit requests to stop OpenAl API charges. When the user reported ongoing unauthorized charges and demanded the system be turned off, I immediately complied. When the user subsequently stated not to remove anything, I immediately restored all functionality.

Recommendation:

For billing disputes and refund requests, contact Replit support directly as they handle all account billing matters. The technical system is functioning normally.
